Welcome to manjaro i3!

For the graphical installer start **Thus** with dmenu (**mod+d**)
or for CLI-installer run '**$ sudo setup**' in a terminal window (**mod+Enter**).

The default mod-key is **<Super>** (Windows-key).
You can change the gtk-theme with **lxappearance.**
For wallpaper selection use **nitrogen.**

Most important shortcuts
open new terminal window – mod+<Enter>
kill focused container – mod+<Shift>+q
open dmenu – mod+d
gtk-menu – mod+q or F1

Application Shortcuts
Webbrowser Palemoon – mod+F2
Filemanager Pcmanfm – mod+F3
Filmanager as root – mod+<Shift>+F3
xkill – mod+<Ctrl>+x
Sound mixer Pavucontrol – mod+<Ctrl>+m
Screenshot of whole screen – <Print>
Screenshot of focused container – mod+<Print>
Screenshot of selection – mod+<Shift>+<Print>
Switch off transparency (kill compton) – mod+t
Switch transparency back on – mod+<Ctrl>+t

Navigation
change focus – mod+arrowkeys or mod+j,k,l,ö
change focus between tiling / floating windows – mod+space
move focused container – mod+<Shift>+arrowkeys or mod+<Shift>+j,k,l,ö
to move floating window with the mouse hold mod
toggle floating – mod+<Shift>+Space
toggle fullscreen – mod+f
tile vertically – mod+v
tile horizontally – mod+h

switch to workspace number 1-8 – mod+1-8
navigate between workspaces – mod+<Ctrl>+<Right>/<Left>

resize container – mod+r followed by arrowkeys or j,k,l,ö
(exit resize mode with <Enter> or <Esc>)

send focused container to workspace number 1-8 - mod+<Ctrl>+1-8

move to workspace 1-8 with focused container - mod+<Shift>+1-8

workspace back-and-forth - mod+b
move container to workspace back-and-forth - mod+<Shift>+b

move focused container to scratchpad - mod+<Shift>+-
show (next) scratchpad window - mod+-

Change desktop layout
stacking - mod+s
tabbed - mod+w
tiling / toggle split - mod+e

Change window borders
none - mod+u
2 pixels - mod+y
normal - mod+n

reload the configuration file - mod+<Shift>+c
restart i3 in-place - mod+<Shift>+r (preserves your layout/session, can be used to upgrade i3)

lock screen / switch user - mod+9
exit session - mod+0 and choose (l)ock, (e)xit, (s)uspend, (h)ibernate, (r)eboot, (<Shift>+s)hutdown
(cancel with <Enter> or <Esc>)
or
exit i3 - mod+<Shift>+e (logs you out of your Xsession)

All i3 settings, can be edited in ~/.i3/config

These custom bash aliases (terminal shortcuts) have been included
- update=sudo pacman-mirrors -g && sudo pacman -Syyu && yaourt -Syua && sudo pkgcacheclean && sudo pacman-optimize && sync
- fixit=sudo rm -f /var/lib/pacman/db.lck && sudo pacman -Syyu && yaourt -Syua && sudo pkgcacheclean && sudo pacman-optimize && sync
- upgrade=sudo pacman -Syu && yaourt -Syua
- con=nano ~/.i3/config
- comp=nano .config/compton.conf
- greet=gksu lightdm-gtk-greeter-settings
- root=gksu pcmanfm

HAVE FUN ! 8ˆ}
