Message of Community Release Cinnamon/Mate 15.12 Cycle.

Thank You for Downloading Manjaro.

Manjaro is a community friendly distribution. With a wide spread community over the world.

It fine to have you intoo the community !

As a community you can reach Manjaro on certain channels Forum's / IRC

There is also a documentation that can help you by installing manjaro.

IRC

Irc got it's support from live. On main channel #manjaro are many people that likes manjaro and its community. Even trough some have used manjaro in the past or stil using manjaro. Some channels is possible is not so much users online because most people are in english talking community. It is good if you go for IRC community, Its possible to keep standby on respective irc channel of your region or language!

Some info you can find on :

 - https://wiki.manjaro.org/index.php?title=Manjaro_IRC

 - https://manjaroirc.wordpress.com/

manjaro IRC channels :

This is all channels of your region or language!

 - #manjaro-talk : Off-topic channel

 - #manjaro-fr : French Support channel

 - #manjaro-it / ##manjaro-it : Italian

 - #manjaro-ru : russian

 - #manjaro-br : Brazilian - Portegues

 - #manjaro-es : Spanish users

- #manjaro-fi : finish support channel

- #manjaro-de : German support

- #manjaro-nl : Dutch spoken support channel

Manjaro web support.

Manjaro main adress is mostly popular under manjaro users indeed because bigger assets of users. But is also good to support the region community's good as possible.

Mather of evolution is also wise if users are available on region speaking websites so good as possible.

It Makes the community more a live and sharing stuf would be fine.

But if you run into bugs is also good to report on Mailinglist or on manjaro github page or forum directly.

Manjaro Website's

Version

Manjaro is started at version 0.8 , the last numbered version was 0.8.13. The iso's are evolved to go on build dates.

The first build date are from September 2015, the 15.09 release. The iso build cycle is arround 2 a 3 month iso's get build. The iso versions are based on the iso build cycle. The system its self of manjaro is like 'True Rolling'.

It works in branches, But once installed you have to keep up by updating it.

You can always wait for updating and look on forum's what could be happing. Depend on your needs. but make sure your system maintainance not longer then 2 month's to have atleast pleasure. you can always wait for some weeks offcourse. But as always better if you watch the forum first then upgrade.

We welcome you all !

This is bit of end word! This document was meant to nice the community and bit of manjaro.

Good advice is always, when you start on manjaro do the next think ;

- Open Terminal:

-

- sudo pacman-mirrors -g

-

- sudo pacman -Syy

-

- sudo pacman -Syu

Iso media become older after some weeks, is also good to start fresh with pacman for update before you do regular updates.

I hope you enjoy your manjaro and have fun!
